FARM WAGE RATES RISE TO NEW HIGHS
EMPLOYMENT DOWN FROM YEAR AGO

Continuation of the upward trend in farm wage rates to a new record was reported by the United States Department of Agriculture today. All wage categories were higher than 2 months ago. Monthly rates averaged \$81.30 with board and \$93.10 without board. Daily wages were \$3.65 with board and \$4.16 without board. These are all record highs, except for wages per day with board, which were exceeded slightly in October 1944.

The farm wage index rose 5 points from April 1 to June 1. At 340 percent of the 1910-14 average, the June 1 index was 48 points above April 1, 1944 and 12 points above July 1, 1944. Comparable data for June 1, 1944 are not available.

June 1 farm wage rates were about double those paid 7 years ago. On June 1, 1942, wages per month averaged \$41.50 with board and \$50.40 without board. Daily wages averaged \$1.83 with board and \$2.10 without board.

Farm employment on June 1, 1945, at 10,994,000 persons, was seasonally higher than on May 1, but was 291,000 or about 2½ percent less than on June 1, 1944. Decreases occurred in the number of both family and hired workers compared to a year ago; hired workers were off 3.4 percent, and family workers, 2.4.

Except in the Northeast, total farm employment was below a year ago throughout the entire United States. The largest percentage decreases occurred in the East South Central and the Pacific regions, where total farm employment dropped more than 4 percent. There were fewer family workers in all geographic regions than a year ago. The number of hired workers, however, was up from last June in the New England, Middle Atlantic and Mountain States. All other regions showed a smaller number of hired hands on farms.

The average number of hours worked per day on United States farms was less than a year ago, despite lower farm employment and the necessity for rapid completion of spring planting in Central and Northern areas. Farm operators averaged 12.4 hours per day and hired workers 10.2 hours on the first of June. These averages are both 0.4 hour less than on June 1 a year ago. Cold, wet weather restricted farm activities around June 1 of this year, whereas a year ago conditions favored unusually long work days.

In New England, the total number of workers was estimated at 254,000 on June 1—19,000 over May 1, 1945 and 4,000 over June 1, 1944. Most of the increase over last year occurred in hired labor. Extra workers were used in some sections to replant crops ruined by frosts. Growth and planting were retarded by cold wet

UNITED STATES DEPARTMENT OF AGRICULTURE
Bureau of Agricultural Economics

weather. Potato and corn planting were delayed 2 to 3 weeks. Tobacco setting was proceeding normally, however.

Hired workers on June 1 were working about the same number of hours in New England as a year ago, while farm operators generally worked fewer hours than on June 1, 1944. Farm wage rates show a slight increase over April 1 this year, except in the per-day-without-board classification, which remained practically unchanged.

In the Middle Atlantic States farm wage rates continued to rise, with the highest percentage increase over April in the rate per month without board. Total farm employment at 626,000, advanced 43,000 over May 1 and 13,000 over June 1 last year; family employment, however, increased only 2,000 since May 1 this year and was 9,000 persons less than a year ago. Farm work has been retarded in this area because of cold wet weather. Much corn has not yet been planted, and some other fields had to be replanted when the seed rotted.

Farm wage rates on June 1 in the East North Central region averaged slightly less than on April 1 in all rates except per day with board. Shorter workdays of operators and hired workers reflected weather conditions which prevented normal field operations. The total number of workers employed on June 1 in this region was nearly 3 percent smaller than on June 1, 1944. Poor weather has put farm work somewhat behind schedule. Many northern counties are still too wet and cold for corn and vegetable planting, but in others rapid progress has been made in planting corn, soybeans, potatoes and in setting tobacco and tomatoes. The first cutting of alfalfa has been harvested in areas where weather permitted.

The index of farm wage rates in the West North Central region advanced from 312 on April 1 to 326 on June 1, 1945. Wage rate increases exceeded those of any other region. With farming operations in this region well advanced in spite of wet muddy fields, farm employment has increased seasonally, but is more than 3 percent below June 1, 1944. Both farm operators and hired workers are reported working about a half hour less per day than a year ago.

The farm wage rate index in the South Atlantic region declined slightly from April 1 to June 1, 1945. The number of persons employed on June 1, 1945 was 2.8 percent less than a year earlier, and the farm operators and hired workers were working a half hour less per day. Drought in the eastern and southern sections hindered growth of most crops, except cotton. Citrus harvest has been practically completed. In the northern section of the region, the weather has been favorable for current farm operations.

Farm wage rates on June 1 in the East South Central States averaged slightly lower than on April 1, with declines in Mississippi offsetting steady-to-higher rates elsewhere. Rates per-day-with-board were up a little, with all other categories lower. The length of workday averaged 12.1 hours for operators and 10.1 hours for hired workers on June 1 of this year, a decrease from last June of one-third hour for operators and half an hour for hired labor.

This region showed the greatest decrease from a year ago in total farm employment, 4.4 percent. Declines in both family workers and hired workers contributed to the decrease. Wet cold weather had hindered spring planting in the Ohio River

UNITED STATES DEPARTMENT OF AGRICULTURE
Bureau of Agricultural Economics

Valley. Most of the corn in Kentucky had not yet been planted, and most of the tobacco was still to be ~~set~~. Lowlands in the southern section of the area were drying out and ready for cultivation. Some corn was still to be planted in Alabama and Mississippi, but cotton chopping was making good progress.

Total farm employment of 1,911,000 persons in the West South Central States was up seasonally on June 1, but 7,000 under a year ago. Almost all the decrease occurred in family workers. Corn and cotton were making good progress, with much cotton being chopped. Wheat and barley were being harvested in southwest Oklahoma and north central Texas. Some Texas farmers were still late with their work, with the worst situation in the High Plains where sorghum and cotton planting have been delayed by extremely dry weather.

Monthly wage rates were up slightly from April 1, while daily rates averaged a little lower than 2 months ago. Both farm operators and hired workers were putting in somewhat shorter work days than a year ago. Workdays averaged 12.1 hours for operators and 10.1 hours for hired workers.

Wage rates on June 1 in the Mountain States advanced from 2 months ago. Rates in all categories were up about 5 percent. Monthly wages averaged \$107.00 with board and \$139.00 without board, and daily wages were \$4.83 with board and \$5.77 without board. These wage rates were exceeded only by those on the Pacific Coast. Farm operators worked 12.7 hours per day, a half hour less than last year at this time. Hired labor worked about a half hour less per day than a year ago, averaging 9.7 hours.

Total farm employment, at 462,000 workers, was about 2 percent less than on June 1, 1944. Hired laborers increased 5,000 from June 1 a year ago to 153,000. The number of family workers dropped from 328,000 on June 1 a year ago to the present 309,000. Farm work is progressing well in most sections. Beet blocking and thinning is underway in Idaho and nearly completed in the southwestern part of the State. Livestock are being moved to higher pastures.

On the Pacific Coast, all farm wage rates advanced over April 1 and a year ago. The index of wage rates for this region rose 8 points during the past 2 months to 395 percent of the 1910-14 average on June 1. Although foreign workers and prisoners of war are helping to alleviate the scarcity of farm workers, total farm employment as of June 1 declined more than 4 percent from June 1, 1944. In the northern section of the region, cherries, apricots, and apples were being thinned. Cutting and curing alfalfa and seasonal vegetable harvests were under way in California.

REPORTS FROM NEW SURVEYS OF FARM WAGES
AND WAGE RATES TO BE ISSUED

A series of reports presenting detailed results from the new enumerative surveys of farm wages and wage rates during 1945 will be issued this year by the Bureau of Agricultural Economics. The series will include two types of reports: (1) reports from the quarterly national surveys containing wage information for the United States and major regions; and (2) reports from the special crop area surveys containing wage information for labor used in harvesting particular crops in major production areas of selected States.

Copies of these reports may be obtained upon request to the Bureau of Agricultural Economics, U. S. Department of Agriculture, Washington 25, D. C. In making the request, please specify which types of reports (national or special crop area) you wish to receive, and in the case of special crop area reports, indicate for which of the following States you desire reports: California, Colorado, Florida (report now available), Maryland, New Jersey, New York, North Carolina, Pennsylvania, Texas, Washington, Arizona, Louisiana, and possibly Michigan and Wisconsin.

Summaries of preliminary results from enumerative surveys recently made on wages and wage rates of labor used in harvesting certain fruits and vegetables in specified areas of 4 States follow.

North Carolina Strawberries: Workers were paid an average of 3.8 cents per quart for picking and 27 cents per crate for packing strawberries, according to preliminary returns from a special survey in the Wallace area of North Carolina, covering the peak week of the 1945 season, April 23-28. At these rates, pickers earned an average of 26 cents per hour, while employed, and packers averaged 38 cents per hour. The majority of the hired workers were women and children; males aged 18 to 44 comprised only 5 percent. The 300 hired strawberry workers on the farms covered by the enumeration worked an average of 7.4 hours per day and earned an average of \$2.00 per day.

Louisiana Snap Beans: The survey in the snap bean area of Louisiana included parts of Livingston, Tangipahoa and St. Helena Parishes. This survey covered wages and wage rates paid to 357 harvesters of snap beans during the week of May 6-12, 1945. All bean pickers were paid at piece rates for bushel-size hampers. Rates averaged 49.5 cents per hamper and showed little variation. On the average, workers earned 43 cents an hour, worked 7 hours a day on the farms surveyed, and earned \$3.00 per day. Most of the workers were Negro women and children recruited from nearby farms, towns and villages.

Arizona Lettuce: A survey of 778 workers harvesting lettuce in Maricopa County, Arizona, was made the week of March 25-31, 1945. Over 60 percent of the hired workers were Spanish-American men, 20 percent Spanish-American women and 14 percent Mexican nationals. All the workers were paid by the hour. The average hourly rate was 70 cents an hour for cutting and 64 cents an hour for field packing. Workers harvesting lettuce averaged 7.2 hours and earned \$4.80 a day.

Washington Asparagus: Asparagus harvesters in the Yakima Valley area of Washington averaged 80 cents per hour during the week ended May 12, 1945. The special survey obtained wage information on 212 asparagus workers, of whom 202 were cutters paid by hourly rates, ranging from 75 cents to 85 cents, with the exception of a few 40- and 50-cent rates paid boys or girls under 14 years of age. Approximately 30 percent of the workers surveyed were females. The average age of all workers for whom age information was obtained was 22 years. Asparagus workers on farms covered in the survey worked an average of 10.8 hours per day and earned an average of \$8.60 per day.

COOPERATIVE EXTENSION SERVICE MADE MORE THAN
6 MILLION PLACEMENTS IN 1944

A total of 6,127,000 placements of farm workers were made by the Cooperative Extension Service during 1944. Of this number 5,700,000 were made during the period May 1 to December 31, a gain of 33 percent over placements during the comparable period in 1943. About 96 percent of the placements, or 5,896,000, were made on seasonal jobs lasting 5 months or less. The remainder, 231,000 were placements in jobs of more than five months duration. Approximately 59 percent of the seasonal jobs were filled by men, 13 percent by women and 28 percent by youths (boys and girls under 18). Of the jobs lasting more than five months on which workers were placed, 81.9 percent were filled by men, 5.7 percent by women and 12.4 percent by youths. It is estimated that 2,650,000 different individuals were placed, many workers having been placed more than once during the year.

In the administration of the Extension farm labor program, existing organizational facilities of the Cooperative Extension Service have been utilized at all levels - Federal, State, county, community and neighborhood - additional personnel being hired in the Federal, State and county extension offices as required to handle the new responsibilities; 92 percent of the additional personnel used in the farm placement program were employed in to counties. Because of the seasonality of much of the work on farms, 85% of placements are made during the five months, June through October. Advisory committees were organized in States, counties and communities to assist in determining farm labor requirements and in recruiting and placing workers. The name U. S.; Crop Corps was selected as a convenient label covering all types of workers recruited for agricultural labor. Specialized programs - Victory Farm Volunteers and Women's Land Army, were organized for recruiting from youth and women of villages and cities.

To serve the farmers that use hired labor in the 3,000 agricultural counties in the United States, the Extension Service utilized 9,000 placement offices in 1944. In most counties the county agent's office was used as the central office to receive farmers' orders, to register workers, and to refer workers to the places where they were needed.

Farmers who wished to utilize this service placed orders with the placement offices. These orders gave specific information with regard to the type and amount of work to be done, the wages and perquisites offered, hours of work, date workers were needed, and arrangements for getting the workers to the farm. In 1944 approximately 700,000 different farmers placed 1,600,000 orders for workers.

The Extension Service conducted meetings during the winter months, informing farmers of the procedures for placing orders and obtaining workers. With the help of 125,000 neighborhood leaders, farm labor information has been given to practically every farm family concerned.

Special programs have been inaugurated to assist migratory seasonal workers. An important feature of these programs has been to supply migrant workers with information about job opportunities in areas to which they might migrate. In some areas information stations have been established on major highways to give migratory workers information in regard to crop condition, maturity dates, and need for labor.

The scarcity of local seasonal workers has required highly organized campaigns to get youth, women, business men, factory workers and others to help during peak seasons. Committees organized in towns and cities, consisting of leading local citizens representing civic organizations, schools, newspapers and radio stations, have developed and carried out mobilization campaigns. In some cases,

these campaigns have involved door-to-door solicitation urging urban people to give their spare time to helping with the harvest.

Factory employees, business men and others have been mobilized for farm work during their vacation periods and during free hours in the evening. In some instances, town holidays have been declared during which time stores were closed and townspeople assisted with the local harvest.

When the supply of labor from all local sources was deemed to be insufficient, the Extension Service has determined and certified the need for outside workers. The prisoners of war and foreign workers made available by the Army and the War Food Administration for these emergency situations have been placed with farmers who have contracted for their use. Farmers have been assisted in organizing into county and community farm labor cooperative associations that are responsible for the full and effective utilization of these workers.

More than 1,708,000 placements of youths under 18 years of age, involving approximately 875,000 individuals were made in 1944. Six percent of those placed lived in work camps. Twenty-four percent lived on farms with farm families and 70 percent lived at home.

In 1944, county extension farm labor offices placed about 400,000 individual women in farm work. While most of the women did seasonal farm work, 11,000 were placed on farmers jobs lasting 5 months or longer. Sixteen States operated camps for women farm workers. In 1944 more than 300 farm labor camps received some financial support from Extension farm labor funds, and provided housing for an estimated 62,000 workers.

In 1944 information was supplied in response to more than 1,269,000 inquiries made by Selective Service relative to essentiality of agricultural workers.

Over 1,014,000 farmers were instructed with regard to labor-saving methods, sharing of labor and equipment, et cetera. There were 22,000 communities with organized programs for the exchange of labor and equipment.

**SUMMARY OF RESULTS OF THE 1944 EXTENSION FARM
LABOR PROGRAM JANUARY 1 - DECEMBER 31, 1944 ^{1/}
(48 States and Hawaii)**

RECRUITMENT AND PLACEMENT

Number of orders received from farmers for farm labor 1,584,279
 Estimated number of different farmers with whom one or more workers were placed 700,400
 Total number of farm labor placements 6,127,446

	Seasonal placements ^{2/}	Year-round placements ^{2/}	Total Seasonal and year-round placements
Men	3,453,024	^{3/} 189,437	3,642,461
Women	763,719	12,974	776,693
Youth	1,679,482	28,810	1,708,292
Total	5,896,225	231,221	6,127,446

Estimate of number of different individuals placed:

a. Men 1,375,000
 b. Women 400,000
 c. Boys (under 18) 545,000
 d. Girls (under 18) 330,000
Total 2,650,000

Estimated number of youth placed who lived in--

a. The farm home where employed 150,000
 b. Farm labor camps 35,000
 c. Own home (transported daily to and from work). 690,000
Total 875,000

**MONTHLY FARM LABOR PLACEMENTS
(Adjusted to annual statistical reports)**

^{1/} From 1944 State Annual Statistical Reports.
^{2/} Monthly reports adjusted to annual statistical reports.
^{3/} Includes families placed as sharecroppers and tenants.

HOUSING AND TRANSPORTATION

Number of intrastate workers whose transportation was paid wholly or in part from Extension Farm Labor Funds	21,515
Number of farm labor camps receiving financial support from Extension Farm Labor Funds	325
Number of different workers housed in facilities provided wholly or in part from Extension Farm Labor Funds	65,642

TRAINING AND LABOR UTILIZATION

Number of communities with organized program for exchanging labor and equipment	22,017
Number of organized training courses conducted	1,542
Number of different individual workers trained for farm work:	
a. Men	136,629
b. Women	31,179
c. Youth	148,442
Total	<u>316,250</u>
Number of farm people, labor foremen, and supervisors of youth labor given organized instruction in regard to training and use of inexperienced labor	106,801

SELECTIVE SERVICE

Number of agricultural workers on whom information was supplied for use by Selective Service <u>1/</u>	1,269,799
--	-----------

ORGANIZATION

Number of placement offices operated	
a. By employed personnel	3,954
b. By volunteer leaders	<u>5,201</u>
Total	9,155
Number of county farm labor advisory committees	2,606
Membership of county farm labor advisory committees :	
a. Men	31,654
b. Women	<u>4,210</u>
Total	<u>35,864</u>
Number of subcommittees of county farm labor advisory committees	
a. City, town, and village mobilization committees	3,874
b. Victory farm volunteer subcommittees	2,156
c. Women's Land Army subcommittees	467
d. Camp and other committees	<u>706</u>
Total	<u>7,203</u>
Number of county farm-wage boards	1,409
a. Number of hearings held	2,136
Number of volunteer leaders assisting with the farm labor program (includes members of committees)	176,516

1/ Includes some duplication since information was supplied on some workers more than once during the year.
